

Cyber attacks cost small & medium-sized businesses an average of \$2,235,000*.

If your company uses the Internet, then it faces cyber security risks. It's as simple as that, and extremely dangerous too. It can lead to irreparable damage to your business. You must get ahead of it. And you need to do it fast.

Trusted Solution

To combat this problem and to bring you a comprehensive solution for your IT and cyber security needs, the Michigan Chamber of Commerce has partnered with Michigan's leading provider of managed services, managed cloud, cyber security, managed networks, and other IT services.

False Sense of Security

Though spending on business systems and data security appears to be increasing, the reality of cyber risk proves itself over and over in the headlines that the current investment just isn't enough to provide all-encompassing protection. It's critical for companies to go further than firewalls and traditional IT security, and to take a good hard look at its false sense of security in the digital technology being used.
